

For Nature's sake
-
Ecological Farming

What is the background for SiD's initiative for starting this process?

A landscape photograph showing a bright, hazy horizon line over a dark, silhouetted landmass. The sky is a mix of light and dark tones, suggesting a sunrise or sunset. The overall mood is contemplative and somewhat somber.

What had happened since 1995?

Policy Proposal

**The consumption of pesticides
must be reduced by 95 per cent
by the year 2000**

**SiD recommends that a Food
Ministry be established**

**SiD wants to have the real
social production costs for
conventional and organic
agricultural products made
visible**

To ensure a Danish production of high-quality fruit and vegetables, SiD is of the opinion that a special effort must be made to promote pesticide-free cultivation

Danish forestry would benefit greatly from a label guaranteeing that the product has been produced in an environmentally correct fashion, both with regards to the external environment and the working environment

Respect for the rights of employees must be included in such labeling system, both as regards education, training, and other working conditions, including the working environment

**SiD's principally opinion is that
GMO had to be ban in food
production. And neither in
organic food.**

**Better coordination's among
trade unions and Consumers
International, for a sustainable
food production below here
knowledge about the organic
food productions**

The opinion of SiD is that an essential barrier for development of organic production in EU is the favoring of the conventional agriculture, when we talk about subsidies

The opinion of SiD is that sustainability must be an intergraded part of the code of practice for organic production
