

# Management of changes -role of the workers and their representatives

Sten Gellerstedt, LO Sweden

## Management of changes

- Global warming,
- Global market (China, India),
- Ageing population within EU,
- Continued large increase of IT
- Women's situation?

## Management of change

The social partners within Europe has to cooperate regarding MSD.

- What can the trade union exchange with the employer?
- What can our members get?

A strategic priority is to achieve the workers involvement in the manufacturing development process, from the earliest phase to start of production.

## Challenges for the manufacturer ......

- Several variants of the same product,
- Short-lived products of high quality,
- Reasonable price,
- Short delivery times.

This is valid for booth goods and services

## Challenges for the manufacturer

gives us a mandate for participating in the manufacturing development process.

#### Our contribution

- Reduce time to market without sacrificing the performance and quality of products,
- Attaining the product having the right quality at the right time, place and price.

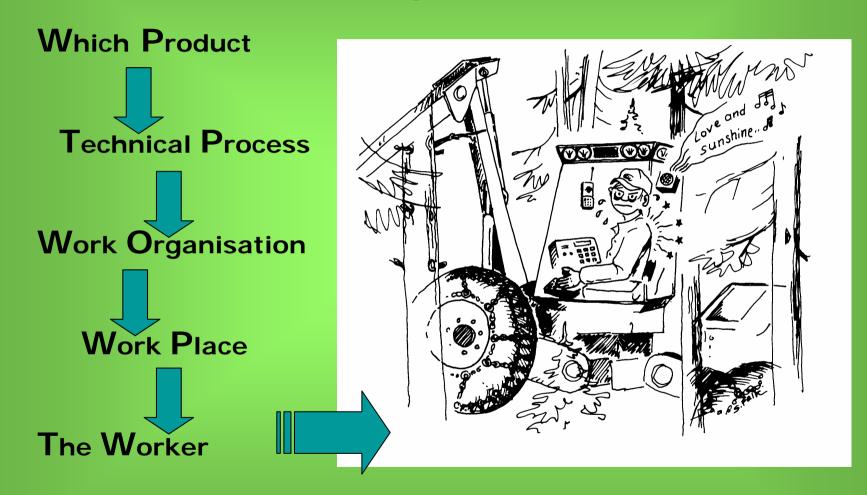

### Our deal

- Better health by preventing MSD,
- Creating good work premises,
- Keeping jobs giving a good income.

## The manufacturing development chain

## The manufacturing development chain ....

Design of the **P**roduct/service (**what** shall be done)

Decide the technical **P**rocess (**how** to do it)

Decide Organisation of work (how the organised it)

Design of the work Place (where it will be done)

Engage the Worker (who will do it)

## The development chain

Product/service (what shall be done)

Technical process (how to do it)

Organisation of work (how to organise)

The work place (where it will be done)

The worker (who will do it)

## Participation of the trade union

No

Seldom

Happens

Quite often

Very seldom

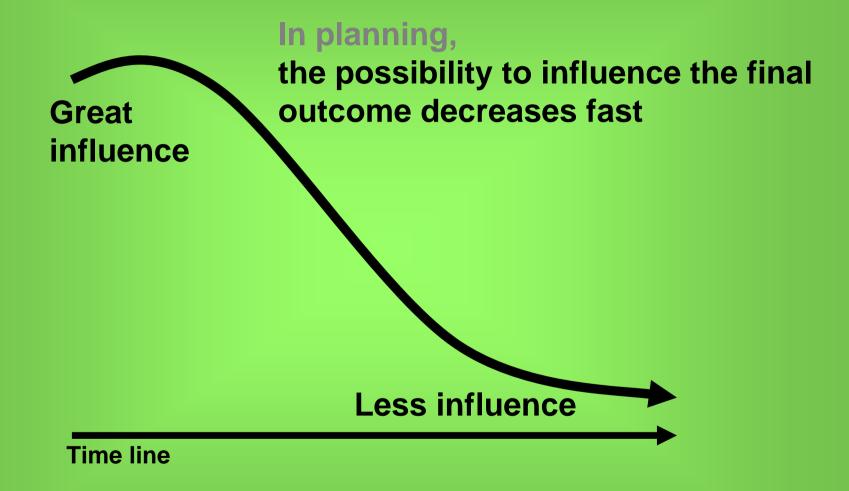

Why we think it 's important to be involved early in the project!

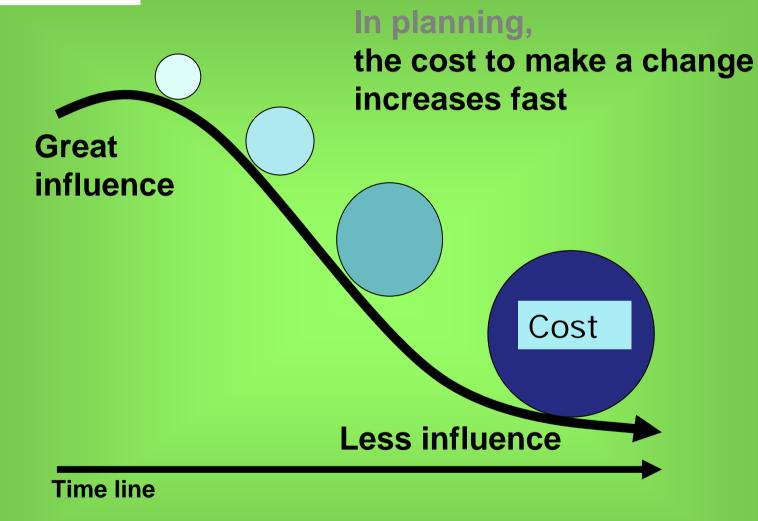

#### **Efficiency and costs**

How these are connected

#### Example of project organisation in Pulp & Paper industry

#### Project committee

Project manager White collar union Production manager Blue collar union

Physical environment

Works management

Maintainance

Project manager

Project administration

Education and training

Running

**Mechanics** 

**Electricians** 

Tech. support

Constructions

## Checklist pre-project

- Personnel and employment policy
- Safety & health policy
- Education and training plan
- Project organisation, subgroup authorization

#### - Personnel and employment policy

#### **Exampels**

- Remunerate broader skill and competence
- Get more than on-the-job-training
- Avoid redundancy,
- If redundancy, provide a secure path to for the members to another job, make a changeover agreement

#### - Safety & health policy

# Set ergonomic requirements early Example Volvo cars

- no blind assemblies (free line of sight)
- no harmful postures
- no entering of car bodies
- no "third-hand-solutions"
- sufficient clearance for hand/arms/tools
- no harmful lifting
- no time critical assemblies

## Problem areas 1

- -To be involved early
- The employer wants to choose our members in the project group

## Problem areas 2

- The employer does not recognise our members as an equal part in the project.
- The project manager is very keen to establish small informal working groups that also have permission to make decisions.

## Conclusions

It is not easy to manage influence in the production planning process, even if you have a local agreement about it.

But if we manage to implement this structure in the workplace, we will increase our members' influence.

#### MANAGEMENT OF CHANGE

## **Debate**
